How to use Bambu Lab glue

This article describes how to use the Bambu Lab glue.

Bambu Lab Glue

	
Glue Stick for Build Plate	**Liquid Glue for Build Plate**
Introduction: It provides suitable adhesion between the build plate and the model and is formaldehyde-free, making it suitable for printing filaments such as PC, PA, ASA-CF、PPA-CF、PPS-CF、PET-CF、PA6-GF. A regular glue stick can also be applied to the build plate to make it easier to remove models printed with certain high-adhesion filaments.	**Introduction:** It is an adhesive specially developed for 3D printing, suitable for printing filaments such as PLA, ABS, PETG, and TPU. When using Bambu Lab Liquid Glue, constant adhesion is maintained without worrying about models falling off or warping.

Notes

- Apply glue before you start printing.
- It is recommended to wait for the build plate to cool down before removing the printed model, which can reduce the risk of damage to the model and help the model to fall off the build plate more easily.
- If there is a lot of glue residue, it is recommended to clean the build plate before the next print to ensure good adhesion.
