

Installation Guide

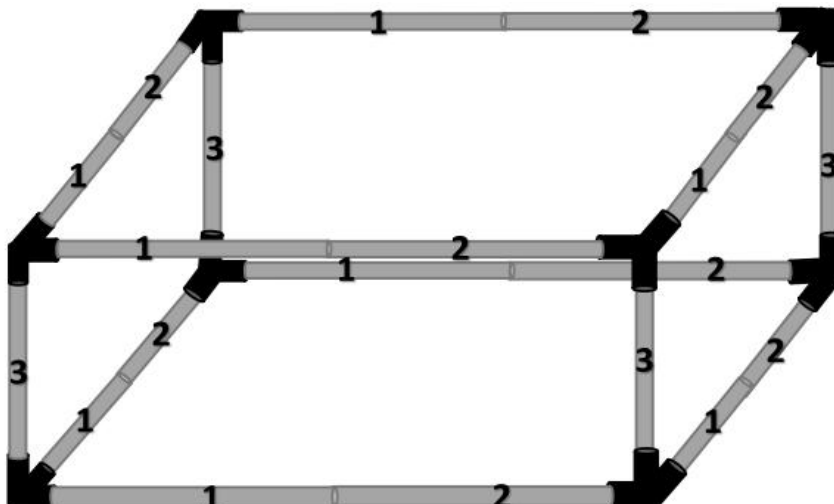

1. Install the iron pipe support as the picture below

2. Open the protective cover

3. Put the protective cover on the iron pipe support

4. Take out the M4*45 round head screws, M4 hexagon nuts, fan and flange, then use the hexagon wrench to fix the fan and flange on the cover. **Please note that the side with the label of the fan is facing outward.**

5. Put the thumb screw adjustable hose clamp on the exhaust pipe, then put the exhaust pipe on the flange, and manually tighten the hose clamp to fix the exhaust pipe. **Please note that there may be metal strips on the cut surface of the exhaust pipe to avoid scratches.**
